

ATTENTION

Do not allow the conductive garments to touch together when turning on during treatment or making adjustments to the intensity of the ReBuilder® unit.

It is important to carefully unsnap the lead wire from the conductive garment after use. Dry the snap connectors and the snaps on the garments before putting them away. This helps maintain optimal function of the garments.

NOTE

Even if you have used Conductive Garments before, please read these instructions completely as information may have changed.

MADE IN USA

Universal Conductive Garment Gloves

304 - 725 - 4915

304 - 725 - 2202

636 Treeline Drive, Charles Town, WV 25414

Please read all the information in this booklet before beginning treatment with the Conductive Gloves.

Verify the contents of your package:

- A. Conductive Garment Gloves with attached snap connectors.
- B. ReBuilder® Electrolyte Spray.

Care & Cleaning

It is suggested you gently hand wash the Conductive Gloves with mild soap as needed. Make sure the snap connectors on the gloves are completely dry before storing the gloves in a dry location. **Do not machine wash or dry the gloves.**

These products are supplied as extra products for your convenience. Many physicians will recommend these garments with use of electrical stimulation devices. These garments may assist in the treatment for pain but are not necessary for use with ReBuilder products.

Using the Conductive Gloves

1. Turn the conductive gloves inside out.
2. Holding the Electrolyte bottle about 6 inches away, spray each conductive glove.
3. Apply the Electrolyte spray evenly across the entire conductive glove until fabric is moist.
4. Turn the conductive glove right-side out.
5. Repeat spray to the conductive gloves as necessary to maintain desired moisture level for your treatments. (More Electrolyte can be used during treatment, if needed.)

Putting on the Conductive Gloves

Before using, wash your hands with soap and water. Slide the Conductive Gloves onto each hand. To reduce stretching, try to avoid “pulling” the gloves on.

Connecting the Snaps

Snap connectors will be connected to the Conductive Gloves. Attach the lead wire from the stimulator into the snap connector. (See fig. 2) You can remove the snaps if it makes it easier to attach to the lead wire.

Connecting to the Stimulator

Attach your existing lead wire into the top of your ReBuilder stimulator. Please note the irregular shape of the output jack and the end of the lead wire so that you insert the wire correctly. (See fig. 1)

Insert the metal prongs of the lead wire into each of the snap connectors.

It does not matter if the snap is on the inside or outside of your wrist.

Color of the snap may vary.
